

Reflective Diary 1

Project in Wireless Communication (EQ2440)

-Animesh Das

901101-0015

As a part of the management and theory group, I have worked mainly on the management tasks and resource allocation and following up our progress both as a group and as an individual.

I have worked on the modification of the project plan with Xavier and also talked with every member and documented the individual progress and integrated it in our progress report 1.

On the theory part, I have worked with the testing of Matlab codes with Xavier and Jonas and we are working on to improve our design further to have a more efficient output and integrating the android tasks in our project. We are also working on the design of RLS algorithm to compare its performance in our system with the LMS algorithm we already have. We are actually trying to do trial and error test and find the best outcome to implement in our system.
